

Press Release October 2011

**JenLab releases the compact multiphoton
microscope 2PM for two-photon imaging and
nanosurgery**

The company JenLab GmbH, pioneer of the multiphoton tomograph, releases a further innovative product: the multiphoton laser microscope *2PM®*. The ultracompact low-cost femtosecond laser microscope provides high-resolution two-photon images. Furthermore, it can be used for precise nanosurgery. Major applications include 3D imaging of living cells, the optical cleaning of stem cell cultures as well as the patented femtosecond laser transfection.
